

Hot Repair Works on Glass Melting Furnaces

Hot Repair Works on glass tanks requires careful, responsible and reliable handling.

Therefore we have placed high quality demands on tooling and machines to assure a maximum of operating safety.

Knowledgeable and experienced personnel are absolutely indispensable.

Boring and repairing on producing furnaces can become necessary for a variety of reasons, such as:

- Installation of electrode holders
- Pushing of electrodes
- Installation of bubbling tubes
- Installation of a variety of measuring probes
- Installation of cameras in the furnace combustion space
- Examination bores
- Drainage bores
- Bores for glass discharge
- Plating in the area of the electrode holders
