

Process Control Systems and Visualisation

Today, process control and visualisation are an essential component of processing operations, even for medium and small installations. The process control system PCS 7 offers an optimum solution of flexibility and connection to sensors and actuators with Profibus.

We can offer you:

- Specially designed solutions and optimisations for glass production and glass processing
- Clearly arranged software design
- Suitable hardware for your application
- Training of your personnel at our facility
- Familiarisation of your specialists at the installation
- Always available service
